Libraries

```
library(lubridate)

##
## Attaching package: 'lubridate'

## The following object is masked from 'package:base':
##
##     date
```

Data

Variables used

```
month <- "Apr"
year <- 2019
```

Read Data In

The data is a CSV file that is created by saving the ACR tab of the FPA Excel Workbook.

```
ACR <- read.csv(file = "../data/ACR.csv",
                stringsAsFactors = FALSE)
name <- c("SQA",
          "Application",
          "CRNumber",
          "CRDate",
          "CRApproved",
          "IENumber",
          "IEDate",
          "IEApproved",
          "Reason",
          "Comments")
names(ACR) <- name
rm(name)
```

Format the Data

Convert to Factor

```
ACR$SQA <- as.factor(ACR$SQA)
ACR$Application <- as.factor(ACR$Application)
ACR$CRApproved <- as.factor(ACR$CRApproved)
ACR$IEApproved <- as.factor(ACR$IEApproved)
levels(ACR$IEApproved)[1] <- NA
ACR$Reason <- as.factor(ACR$Reason)
levels(ACR$Reason)[1] <- NA
```

Convert to Dates

```
ACR$CRDate <- as.Date(ACR$CRDate, format = "%d-%b-%y")
ACR$IEDate <- as.Date(ACR$IEDate, format = "%d-%b-%y")
ACR$CRmonth <- lubridate::month(ACR$CRDate, label = TRUE)
ACR$CRyear <- lubridate::year(ACR$CRDate)
ACR$IEMonth <- lubridate::month(ACR$IEDate, label = TRUE)
ACR$IEyear <- lubridate::year(ACR$IEDate)
```

Structure of The Data

```
str(ACR)
```

```
## 'data.frame':   494 obs. of  14 variables:
##  $ SQA           : Factor w/  6 levels "Beilah","Liz",...: 3 3 3 6 6 2 2 3 3 6 ...

```

Metrics

Select Data

Data is selected first for the Month and Year of interest. The selection is based on both the CR and I&E dates. This selection is used as a master dataframe. Two additional dataframes are produced: the first of the approval of the CR in the month and the second for the approval of the I&E in the month.

```
#create master dataframe
work <- subset(ACR,
               subset = (CRmonth == month & CRyear == year) |
                       (subset = IEmonth == month & IEyear == year))
# Create the CR data frame
workCR <- subset(ACR,
                 subset = CRmonth == month & CRyear == year)
# create the IE data frame.
workIE <- subset(ACR,
                 subset = IEmonth == month & IEyear == year)
```

Counts

Data Changes (CR) Request Approved

```
nrow(subset(workCR,
             subset = (CRApproved == "A" | CRApproved == "A-FP"))) -
nrow(subset(workCR,
             subset = (IEApproved == "D")))
```

```
## [1] 47
```

Data Change Request Disapproved

```
nrow(subset(workCR,
             subset = (CRApproved == "D")))
```

```
## [1] 8
```

Implementation and Effectivity (IE) Approved

```
nrow(subset(workIE,
             subset = (IEApproved == "A" | IEApproved == "A-FP")))
```

```
## [1] 29
```

IE Disapproved

```
nrow(subset(workIE,  
            subset = (CRApproved == "D")))
```

```
## [1] 0
```

First pass acceptance

CR

```
nrow(subset(workCR,  
            subset = CRApproved == "A-FP")) /  
nrow(workCR) * 100
```

```
## [1] 77.19298
```

IE

```
nrow(subset(workIE,  
            subset = IEApproved == "A-FP")) /  
nrow(workIE) * 100
```

```
## [1] 62.5
```

Total Process

This is the number of data changes that had both the CR and IE approved on first pass.

```
nrow(subset(work,  
            subset = (CRApproved == "A-FP" & IEApproved == "A-FP")) /  
nrow(work) * 100
```

```
## [1] 32.89474
```

Number by Application

Opened

```
table(subset(workCR,  
            subset = CRApproved != "D")$Application)
```

Completed

```
table(subset(workIE,  
            subset = IEApproved != "D")$Application)
```

Total

```
table(subset(workCR,  
            subset = CRApproved != "D")$Application) +  
table(subset(workIE,  
            subset = IEApproved != "D")$Application)
```

Time to Complete A Data Change

This is the interval between CR approval and IE approval

```
# select from work all that had approved IE for the month
work.all <- subset(work,
  subset = (IEApproved == "A" | IEApproved == "A-FP"))
# need to figure out a way to make this unique and selected the correct record

# compute interval
work.all$Interval <- as.numeric(work.all$IEDate - work.all$CRDate)
# results
nrow(work.all)

## [1] 29
